

GATEKEEPER CARD PRO™

SECURITY MINI-COMPUTER

The Revolution Continues: Security Mini-Computer Inside Computer

The Gatekeeper Card Pro™ laptop-embedded Security Mini-Computer is the 'next generation of Internet Security': a powerful Linux-based ExpressCard compatible miniaturized computer on a seamless card with 13 built-in security applications providing the most efficient, transparent, user-friendly and robust mobile security solution. Designed to off-load installed security software from your laptop, the plug-in Gatekeeper Card Pro is a full-blown security-dedicated mini-server with its own processor, memory and hardened operating system that extends corporate-level security to traveling laptops. Unobtrusive and simple to install inside the laptop, the Gatekeeper Card Pro blocks all Internet threats before they reach your laptop's operating system.

The Ultimate Hardware Internet Security Suite

Physical Separation

Internet Hotspots are notorious for their security risks. The fact that you are connected to the same network shared by hundreds of users reveals the identity of your computer, exposing it to security threats.

With Gatekeeper Card Pro you can connect to any unsecured hotspot knowing that you are completely protected. It hides your laptop's IP Address and creates a physical barrier from incoming threats, protecting the laptop from unknown attacks by dropping the connection as threats are identified.

Performance Boost

It is widely known that security software installed on a PC can dramatically reduce its performance. In fact, PC World* has recently revealed that one of the top selling security suites "may slow your PC unacceptably".

Gatekeeper Card Pro frees your laptop from security tasks without being a drain on laptop's performance. All the security applications within the Yoggie device operate in coordination, without security software conflicts or failures.

*PC World UK - May 2007

Plug and Forget

With Gatekeeper Card Pro you don't have to be a security expert to enjoy Pentagon level protection. All you have to do is simply plug Gatekeeper Card Pro in and you are completely safe. Since it is embedded inside the laptop your security protection is always plugged-in and operating.

Gatekeeper Card Pro even features automatic security updates and upgrades, so you don't have to worry about downloads since they accumulate on the Yoggie device rather than your laptop. IT managers can remotely manage all dispersed laptops that have a Gatekeeper Card Pro installed through the (optional) Yoggie Management Server.

Gatekeeper Card Pro - Extend Your Corporate Security

Traveling laptops are considered corporate-security weak spots. Inside the corporate network, computers are shielded from outside threats by hardware-based security, with the latest updates and security policies. But as soon as laptops leave the network they are susceptible to security vulnerabilities and dependant on whether or not the user downloaded the latest updates and security policies. As these laptops return, they may "infiltrate" security threats into the network - an IT manager's nightmare.

Gatekeeper Card Pro extends the same level of security enforced within the corporate network to the mobile and remote workforce. All the security applications that can be found in the corporate server room are packed into Yoggie's tiny mini-computer plug-in card.

Transparent Security Policy Enforcement

The optional Yoggie Management Server™ monitors and manages the fleet of traveling Gatekeeper Card Pro devices. Installed in the IT server room, it provides security policy updates, signatures, and rule-base updates, while obtaining local logs and events for complete visibility. Gatekeeper Card Pro settles the conflict between the user's desire for freedom and the IT manager's concern for security. The laptop's connection to the Internet is disabled unless the Gatekeeper Card Pro is plugged-in. Finally, the security of the entire corporate workforce, both inside and outside the network, can be centrally managed and enforced by the IT organization.

Yoggie Management Server

Yoggie Provides Pentagon Level Protection

Operating as a computer inside computer - the card is inserted directly into a laptop's ExpressCard slot, allowing business users and consumers alike to benefit from unrivalled and transparent Internet security wherever and whenever they connect. Designed to off-load installed security software from your laptop, this dedicated mini-server provides laptop users with the following benefits:

- Block all Internet threats outside, before they reach your laptop
- Hide your laptop from Internet Hackers
- Boost your laptop's performance
- Hardened Linux Operating System
- Protection from known as well as unknown attacks
- Plug and Forget easy installation and operation with no special technical knowledge required
- Transparent always on security with embedded card always plugged-in
- Security software updates accumulate on the Yoggie's external mini-server, instead of draining your laptop's resources

Advantages of Hardware Security

COMPARISON CHART	YOGGIE™	SOFTWARE SOLUTIONS
Liberate your CPU resources from security needs	YES	NO
Free-up your memory for security	YES	NO
Shorten restart / reboot times	YES	NO
Workflow unaffected by security updates	YES	NO
Laptop performance unaffected by security updates	YES	NO
Response when under attack	PREVENTATIVE	REACTIVE
Physical separation from network	YES	NO
Security pop-ups eliminated	YES	NO
Security effects on laptop performance	LESS THAN 1% PERFORMANCE LOSS	UP TO 30% PERFORMANCE LOSS
Laptop performance stable over time	YES	NO
Hardened and secured operating system	YES	NO

Fixed Core Software

Along with Yoggie's proprietary security programs, the Gatekeeper Card Pro is packed with some of the toughest security products available anywhere - all working in tandem to produce a seamless security solution.

All-in-One Pentagon Level Protection

- Anti-Virus
- Anti-Spam
- Anti-Phishing
- Anyi-Spyware
- Intrusion Detection System (IDS)
- Intrusion Prevention System (IPS)
- Firewall (Stateful inspection)
- VPN Client
- Web Filtering/Parental Content Control
- Transparent Email and Web Proxies
- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™

4X Performance

Improved Platform Architecture. 4 Times Faster.

Weight: 15 gm./0.53 oz Dimensions: Standard ExpressCard 34
